FIGURES

1.1	Seven steps of a risk chain: The example of nuclear energy	7
1.2	Levels of vertical and horizontal governance	9
1.3	The 'technocratic' model	10
1.4	The 'decisionistic' model	10
1.5	The 'transparent' model	10
1.6	Systematic classification of risk perspectives	15
1.7	Review of sociological approaches to risk	24
2.1	The five elements of risk governance	48
3.1	Extended assessment scheme for chemicals according to the PrecauPri report	89
3.2	Two-parameter filter with three grades	90
4.1	Patterns of value clusters in the context of cultural theory of risk	122
4.2	Graphical representation of the arena metaphor	132
4.3	Amplification and attenuation	139
4.4	Four context levels of risk perception	141
5.1	Acceptable, tolerable and intolerable risks	150
5.2	Example of loss exceedance probability curves	152
5.3	Risk classes	163
5.4	Decision tree for evaluating and classifying risks	168
5.5	Risk dynamic	171
7.1	Source–transmitter–receiver model	209
7.2	Organizational structure of risk communication	210
7.3	Signal flow model for risk communication	213
7.4	Risk communication according to the concept of the social amplification of risk	216
7.5	Different levels of trust in risk communication	225
7.6	The peripheral cues of persuasion in communication	234
7.7	The central route of persuasion	236
7.8	The peripheral route of persuasion	237

7.9 The three levels of risk debates 244
7.10 Risk-taking in the context of cultural value clusters 249
8.1 The risk management escalator and stakeholder involvement 280
8.2 Four central systems of society 287
8.3 Basic concepts and elements of the cooperative discourse model 345
9.1 Risk governance goes much further 354
10.1 Risk governance framework 365
10.2 Inclusive risk governance 367

TABLES

1.1 Risks taxonomy according to hazardous agents 6
2.1 Components of pre-assessment in handling risks 51
3.1 Generic components of risk assessment 73
3.2 Comparison between the former system and REACH 85
4.1 Conditions and requirements for information selection 100
4.2 Steps for information processing 101
4.3 Intuitive biases of risk perception 103
4.4 List of important qualitative risk characteristics 109
4.5 The five semantic images of risk perception 112
4.6 Value clusters and their social and cultural conditions 120
4.7 Components of trust 124
5.1 Tolerability/acceptability judgement 155
5.2 Criteria for evaluating risks 161
5.3 Overview of the risk classes, their criteria and typical representatives 165
5.4 Overview of different degrees of incertitude with regard to the main criteria and the risk classes 165
6.1 Generic components of risk management 177
6.2 Risk characteristics and their implications for risk management 182
6.3 Risk management challenges and corresponding strategies 188
7.1 Components of trust 223
7.2 Factors of credibility for different levels of analysis 226
7.3 The three levels of risk debate and their communication needs and evaluation criteria 245
7.4 Evaluation of the basic considerations of risk communication 268
8.1 The six concepts of stakeholder and public involvement and their salient features 303
8.2 Generic steps in a decision–analytic approach 315
8.3 Overview of evaluation criteria associated with different participation concepts 324
8.4 Evaluation of different models of participation 326

8.5 Pool of instruments for risk management challenges 336
9.1 Characteristics of policy-making styles 360
