Preface	<i>xiii</i>
<i>Introduction</i>	<i>1</i>
The Reflection Problem	/
The Law of Decreasing Credibility	2
Identification and Statistical Inference	3
Prediction and Decisions	6
Coping with Ambiguity	6
Organization of the Book	8
The Developing Literature on Partial Identification	//
I Prediction with Incomplete Data	
1 <i>Conditional Prediction</i>	<i>17</i>
1.1 Predicting Criminality	<i>17</i>
1.2 Probabilistic Prediction	<i>18</i>
1.3 Estimation of Best Predictors from Random Samples	<i>22</i>
1.4 Extrapolation	<i>25</i>
1.5 Predicting High School Graduation	<i>28</i>
<i>Complement IA. Best Predictors under Square and Absolute         Loss</i>	<i>30</i>
<i>Complement IB. Nonparametric Regression Analysis</i>	<i>32</i>
<i>Complement IC. Word Problems</i>	<i>34</i>

2	<i>Missing Outcomes</i>	36
2.1	Anatomy of the Problem	37
2.2	Bounding the Probability of Exiting Homelessness	40
2.3	Means of Functions of the Outcome	42
2.4	Parameters That Respect Stochastic Dominance	44
2.5	Distributional Assumptions	45
2.6	Wage Regressions and the Reservation-Wage Mode! of Labor Supply	48
2.7	Statistical Inference	51
	<i>Complement 2A. Interval Measurement of Outcomes</i>	54
	<i>Complement 2B. jointly Missing Outcomes and Covariates</i>	56
	<i>Complement 2C. Convergence of Sets to Sets</i>	60
3	<i>Instrumental Variables</i>	62
3.1	Distributional Assumptions and Credible Inference	62
3.2	Missingness at Random	64
3.3	Statistical Independence	66
3.4	Equality of Means	69
3.5	Inequality of Means	71
	<i>Complement 3A. Imputations and Nonresponse Weights</i>	73
	<i>Complement 3B. Conditioning on the Propensity Score</i>	75
	<i>Complement 3C. Word Problems</i>	76
4	<i>Parametric Prediction</i>	83
4.1	The Normal-Linear Model of Market and Reservation Wages	83
4.2	Selection Models	87
4.3	Parametric Models for Best Predictors	89
	<i>Complement 4A. Minimum-Distance Estimation of Partially Identified Models</i>	91
5	<i>Decomposition of Mixtures</i>	94
5.1	The Inferential Problem and Some Manifestations	94
5.2	Binary Mixing Covariates	98
5.3	Contamination through Imputation	102
5.4	Instrumental Variables	105
	<i>Complement 5A. Sharp Bounds on Parameters That Respect Stochastic Dominance</i>	107
6	<i>Response-Based Sampling</i>	109
6.1	The Odds Ratio and Public Health	110
6.2	Bounds on Relative and Attributable Risk	114

6.3	Information on Marginal Distributions	118
6.4	Sampling from One Response Stratum	119
6.5	General Binary Stratifications	122

## II Analysis of Treatment Response

7	<i>The Selection Problem</i>	127
7.1	Anatomy of the Problem	128
7.2	Sentencing and Recidivism	134
7.3	Randomized Experiments	136
1A	Compliance with Treatment Assignment	140
7.5	Treatment by Choice	148
7.6	Treatment at Random in Nonexperimental Settings	151
1.1	Homogeneous Linear Response	153
	<i>Complement 7A. Perspectives on Treatment Comparison</i>	157
	<i>Complement 7B. Word Problems</i>	160
8	<i>Linear Simultaneous Equations</i>	167
8.1	Simultaneity in Competitive Markets	167
8.2	The Linear Market Model	170
8.3	Equilibrium in Games	174
8.4	The Reflection Problem	177
9	<i>Monotone Treatment Response</i>	183
9.1	Shape Restrictions	183
9.2	Bounds on Parameters That Respect Stochastic Dominance	186
9.3	Bounds on Treatment Effects	189
9.4	Monotone Response and Selection	191
9.5	Bounding the Returns to Schooling	193
10	<i>The Mixing Problem</i>	198
10.1	Extrapolation from Experiments to Rules with Treatment Variation	198
10.2	Extrapolation from the Perry Preschool Experiment	200
10.3	Identification of Event Probabilities with the Experimental Evidence Alone	204
10.4	Treatment Response Assumptions	206
10.5	Treatment Rule Assumptions	207
10.6	Combining Assumptions	210

11	<i>Planning under Ambiguity</i>	211
11.1	Studying Treatment Response to Inform Treatment Choice	211
11.2	Criteria for Choice under Ambiguity	214
11.3	Treatment Using Data from an Experiment with Partial Compliance	218
11.4	An Additive Planning Problem	222
11.5	Planning with Partial Knowledge of Treatment Response	226
11.6	Planning and the Selection Problem	229
11.7	The Ethics of Fractional Treatment Rules	233
11.8	Decentralized Treatment Choice	235
	<i>Complement 11 A. Minimax-Regret Rules for Two Treatments Are Fractional</i>	237
	<i>Complement 11 B. Reporting Observable Variation in Treatment Response</i>	239
	<i>Complement 11 C. Word Problems</i>	241
12	<i>Planning with Sample Data</i>	243
12.1	Statistical Induction	243
12.2	Wald's Development of Statistical Decision Theory	245
12.3	Using a Randomized Experiment to Evaluate an Innovation	250
<b>III Predicting Choice Behavior</b>		
13	<i>Revealed Preference Analysis</i>	259
13.1	Revealing the Preferences of an Individual	260
13.2	Random Utility Models of Population Choice Behavior	267
13.3	College Choice in America	270
13.4	Random Expected-Utility Models	274
	<i>Complement 13A. Prediction Assuming Strict Preferences</i>	278
	<i>Complement 13B. Axiomatic Decision Theory</i>	282
14	<i>Measuring Expectations</i>	284
14.1	Elicitation of Expectations from Survey Respondents	285
14.2	Illustrative Findings	290

14.3	Using Expectations Data to Predict Choice Behavior	295
14.4	Measuring Ambiguity	298
	<i>Complement MA</i> , The Predictive Power of Intentions Data: A Best-Case Analysis	300
	<i>Complement MB</i> . Measuring Expectations of Facts	305
15	<i>Studying Human Decision Processes</i>	308
15.1	As-If Rationality and Bounded Rationality	309
15.2	Choice Experiments	312
15.3	Prospects for a Neuroscientific Synthesis	317
	References	321
	Author Index	339
	Subject Index	343
