Foreword	xi		
Dedications	xiii		
Acknowledgements	xv		
Contributors	xvii		
1 The nature and properties of leather	1		
<i>Roy Thomson</i>			
References	3		
2 Collagen: the leathermaking protein	4		
<i>B.M. Haines</i>			
2.1 The collagen molecule	4		
2.2 Bonding within the molecule	6		
2.3 Bonding between molecules	6		
2.3.1 Salt links	6		
2.3.2 Covalent intermolecular bonding	7		
2.4 Fibril structure	8		
2.5 Shrinkage temperature	9		
References	10		
3 The fibre structure of leather	11		
<i>B.M. Haines</i>			
3.1 The structure of mammalian skins	12		
3.2 Variation of structure between animal types	12		
3.2.1 Mature cattle skins	12		
3.2.2 Calfskins	14		
3.2.3 Goatskins	14		
3.2.4 Sheepskins	14		
3.2.5 Deerskins	15		
3.2.6 Pigskins	15		
3.3 Grain surface patterns	17		
3.4 Suede surfaces	17		
3.5 Variation in structure with location in the skin	17		
3.6 Directional run of the fibres	19		
		3.7 The influence of fibre structure on leather properties, structure and tear strength	19
		3.8 Structure and leather handle	20
		3.9 Fibre weave and movement	20
		References	21
		4 The chemistry of tanning materials	22
		<i>A.D. Covington</i>	
		4.1 Introduction	22
		4.2 Vegetable tanning	23
		4.3 Mineral tanning	27
		4.3.1 Chromium(III) salts	27
		4.3.2 Aluminium(III) salts	29
		4.3.3 Titanium(IV) salts	29
		4.3.4 Zirconium(IV) salts	30
		4.4 Oil tanning	30
		4.5 Aldehyde tanning	31
		4.5.1 Formaldehyde tanning	31
		4.5.2 Glutaraldehyde tanning	31
		4.5.3 Oxazolidine tanning	31
		4.6 Syntans	32
		4.6.1 Auxiliary syntans	32
		4.6.2 Combination or retanning syntans	33
		4.6.3 Replacement syntans	33
		4.7 Overview	34
		References	34
		5 The mechanisms of deterioration in leather	36
		<i>Mary-Lou E. Florian</i>	
		5.1 Introduction	36
		5.2 Agents of deterioration	37
		5.2.1 Introduction	37
		5.2.2 Acid hydrolysis	38
		5.2.3 Oxidation	38
		5.2.4 Metals and salts	40

5.2.5	Heat	41	7.4.2	Tanning	80
5.2.6	Water	41	7.4.3	Post-tanning	81
5.3	Collagen	43	References		81
5.3.1	Bonds in collagen: sites of deterioration mechanisms	43	8	The social position of leatherworkers	82
5.3.2	Peptides	43		<i>Robert D. Higham</i>	
5.3.3	Amino acids in collagen	44		References	87
5.4	Vegetable tannins	47	9	Gilt leather	88
5.4.1	Introduction	47		<i>Roy Thomson</i>	
5.4.2	Antioxidant ability of tannins	47	9.1	Production and art historical aspects	90
5.4.3	Analysis of tannins in aged leather — deterioration mechanisms	47	9.2	Conservation and restoration	91
5.5	Other chemicals present due to fabrication and use	50	10	<i>Cuir bouilli</i>	94
5.5.1	Introduction	50		<i>Laura Davies</i>	
5.5.2	Fats, oils and waxes	51	10.1	The <i>cuir bouilli</i> technique	94
5.5.3	Sulphur compounds and their acids	51	10.2	Leather moulding techniques	94
5.5.4	Acids in leather due to fabrication or use	52	10.3	The origins of the <i>cuir bouilli</i> technique	94
5.5.5	Perspiration	52	10.4	Changes undergone by the leather in the <i>cuir bouilli</i> process	97
5.6	Denaturation and shrinkage temperatures as a method of assessment for all tannages	52	10.5	Conservation of <i>cuir bouilli</i>	97
5.7	Summary	53	10.5.1	Stability	97
Acknowledgements		54	10.5.2	Damage caused by old treatments	98
References		54	10.5.3	Original treatments of <i>cuir bouilli</i> leather	98
6	Testing leathers and related materials	58	10.6	Case study of the conservation of <i>cuir bouilli</i> leather	98
