

Logic & Natural Language

On Plural Reference and Its Semantic and
Logical Significance

HANOCH BEN-YAMI

Contents

<i>Preface</i>	vii
1. Introduction	1
PART I: PLURAL REFERRING EXPRESSIONS	
2 Plural Referring Expressions in Natural Language	7
2.1 <i>The Common View on Reference</i>	7
2.2 <i>Plural Reference</i>	8
2.3 <i>The Implausibility of Reductive Analyses of Plural Referring Expressions</i>	16
3 Common Nouns as Plural Referring Expressions	28
3.1 <i>The Functioning of Common Nouns</i>	28
3.2 <i>On an Alleged Ambiguity of the Copula</i>	31
3.3 <i>Attributive and Predicative Adjectives</i>	32
3.4 <i>Natural Kind Terms</i>	35
3.5 <i>Empty Names</i>	37
4 The Sources of the Analysis of Referring Nouns as Predicates	41
4.1 <i>Frege</i>	41
4.2 <i>Russell and Bradley</i>	44
5 Reference	47
PART II: QUANTIFICATION	
6 Quantification: Natural Language versus the Predicate Calculus	59
6.1 <i>The Nature of Quantification, and the Differences between Its Implementations</i>	59
6.2 <i>Definite and Indefinite Noun Phrases</i>	61
6.3 <i>Geach and Strawson on Plural Reference and Quantification</i>	63
6.4 <i>Binary and Restricted Quantification, and Comparative Quantifiers</i>	66
6.5 <i>Is 'Existence' a Quantifier?</i>	73
7 Multiple Quantification	78
7.1 <i>On Ambiguity and Formalization</i>	78
7.2 <i>Iterative Reading of Multiply Quantified Sentences</i>	80
7.3 <i>Additional Readings of Quantified Sentences</i>	84
7.4 <i>On the Passive, Converse Relation-Names, and the Copula</i>	90

8	Pronouns, Variables, and Bound Anaphors	95
8.1	<i>Pronouns and other Definitive Noun Phrases as Alleged Variables</i>	95
8.2	<i>Variables versus Bound Anaphors</i>	96
8.3	<i>Rules for the Choice of Anaphors</i>	98
8.4	<i>Conditional Donkey Anaphora</i>	100
8.5	<i>Predicate Connectives, and Bound Anaphora across Sentential Connectives</i>	107
8.6	<i>The Relation between the Truth-Value of a Quantified Sentence and those of Its Instances</i>	109

PART III: A DEDUCTIVE SYSTEM FOR NATURAL LANGUAGE

9	Derivation Rules and Consistency	115
9.1	<i>Some General Considerations</i>	115
9.2	<i>Basic Characteristics of the System</i>	117
9.3	<i>Transposition</i>	119
9.4	<i>Universal Elimination</i>	120
9.5	<i>Universal Introduction</i>	121
9.6	<i>Particular Introduction</i>	122
9.7	<i>Particular Elimination</i>	123
9.8	<i>Referential Import</i>	124
10	Applications I: Aristotelian Logic	128
10.1	<i>The Square of Opposition</i>	128
10.2	<i>Immediate Inferences</i>	130
10.3	<i>Syllogisms</i>	131
11	Application II: Beyond Aristotelian Logic	133
11.1	<i>Generalization of Transposition</i>	133
11.2	<i>Multiply Quantified Sentences</i>	134
11.3	<i>Predicate- and Sentence-Connectives</i>	136
11.4	<i>The Logic of Relations</i>	140
11.5	<i>Identity</i>	142
12	Conclusions	148
	<i>Bibliography</i>	153
	<i>Index</i>	158
