

Contents

1	Introduction: Historical Methodical and Conceptual Frames	1
1.1	Unifications of the Sciences	3
1.2	The Importance of Structural Mathematics and Computer Models	8
1.3	A Short Glossary on Complex Systems, Simulations, and Communication Theory	12
1.3.1	Complex Systems, Attractors, and Trajectories	12
1.3.2	Would-Be-Worlds: The Methods of Simulation	22
1.3.3	Some Basic Concepts of Communication Theory	30
1.4	Artificial Intelligence (AI) – The Quest for a Homunculus	39
1.4.1	A Little Excursion into Science Fiction	41
1.4.2	How Much Can Eliza Understand?	52
1.4.3	Chinese Rooms, Gödel and Other Principal Arguments	59
2	The Operation Called “Verstehen”: Considerations About Formal Systematizations of Understanding	65
2.1	Understanding Versus Explanation	66
2.2	Rules and Intentions – A Systematic of Interpreting	75
2.2.1	Consequences for an Understanding AI	87
2.3	The Hermeneutical Circle: The Difficult Basis of Understanding	91
2.3.1	Excursion into Simulated Detective Stories Readers	98
3	Mental Models, the Geometry of Meaning Generation, and of Information Degrees	105
3.1	The Hermeneutical Necessity of Mental Models	108
3.1.1	A Mathematical Model	114
3.2	The Geometry of Meaning Generation	119
3.2.1	Neural Networks as Meaning Generating Systems	122
3.2.2	First Experimental Series: Training by Back Propagation	125
3.2.3	Second Experimental Series: Optimization by Genetic Algorithms	128
3.2.4	Third Series: Statistical Analysis of Large Samples	131
3.2.5	Fourth Series: The Analysis of Boolean Networks	133

3.2.6	Final Considerations	137
3.3	Information Degree and the Topology of Networks	142
3.3.1	A Final Remark with Respect to AI	150
4	The Understanding of Learning	153
4.1	Methodological Preliminary Remarks and a General Rule Schema	154
4.2	Types of Learning and the According Enforcing Rules	158
4.2.1	Supervised Learning and the According Version of the Enforcing Rule Schema	159
4.2.2	Reinforcement Learning: Of Mice and Men	164
4.2.3	Classical Conditioning: Pavlov's Dog Revisited	171
4.2.4	Self-Organized Learning: Of Juvenile Delinquents and Literary Murders	175
4.2.5	Comparative Considerations	185
4.2.6	Coming Back to AI	190
4.3	Rule Extracting or Learning from Examples	192
5	The Human Factor: Understanding Humans by Artificial Systems	201
5.1	The Origin of Restricted Perception	202
5.1.1	Classical Conditioning and the Competition Between Adidas and Nike	206
5.1.2	The Reduction of Social Perceptions to Social Darwinism	210
5.2	Understanding Readers of Detective Stories	213
5.3	The Reconstruction of Human Discourses	221
5.4	Understanding in Communicative Processes by Mental Models	233
6	Conclusions: AI and a Unified Science	243
