

# Organizations: Social Systems Conducting Experiments

# Contents

<b>1</b>	<b>Introducing Organizations as Social Systems Conducting Experiments</b>	<b>1</b>
1.1	Introduction	1
1.2	Making Sense of Organizations: From “Phenomena” to “Key Features”	1
1.2.1	Situation 1: Strategy Formulation	2
1.2.2	Situation 2: A Worker in Trouble	4
1.2.3	The First “Arche”: The Experimental Character of Organizations	6
1.2.4	The Second “Arche”: The Social Systemic Character of Organizations	6
1.2.5	The Relation Between the Social Systemic and the Experimental Character of Organizations	7
1.3	Organizations as Social Systems Conducting Experiments	8
1.3.1	Conducting Experiments	9
1.3.2	Organizations as Social Systems	17
1.4	Principles Improving Organizational Design	20
1.4.1	Functional Design Principles	21
1.4.2	Specific Design Principles	22
1.5	Conceptual Background	23
1.6	Outline of the Book	25
1.6.1	Part I: Organizations as Social Systems Conducting Experiments with their Survival	25
1.6.2	Part II: Designing Organizations as Social Systems Conducting Experiments	27
1.6.3	Part III: Poor and Rich Survival	28
	References	29
<b>2</b>	<b>The Experimental Arche: Ashby’s Cybernetics</b>	<b>31</b>
2.1	Introduction	31
2.2	Cybernetics: Effective Methods for the Study of Complex Systems	32
2.2.1	Describing Behavior: “Systems” and “Transformations”	33
2.2.2	Regular Behavior and Input	36
2.2.3	A procedure to Describe Behavior and Identify Regularity	38
2.3	Cybernetics: Effective Methods for the Control of Complex Systems	44
2.3.1	Ashby’s Views on Regulation: Definition, Types of Regulation and Requisite Variety	44
2.3.2	Control, Design and Operational Regulation	52
2.3.3	Adaptive Behavior	63

2.4 Organizations as Systems Conducting Experiments	67
References	70
<b>3 The Experimental Arche Continued: Von Foerster</b>	
on Observing Systems	71
3.1 Introduction	71
3.2 Two problems in first-order cybernetics	74
3.2.1 The problem of selection	74
3.2.2 The problem of defining the transformation	75
3.2.3 Dealing with Both Problems: The Cybernetics of Observing	81
3.3 Observers as Closed Systems Producing Eigenvalues	81
3.3.1 Closed Systems and Their Eigenvalues	82
3.3.2 Closure, cognition and observing	89
3.3.3 Problems of First-order Cybernetics Revisited	99
3.4 Von Foerster and the Risky Nature of the Organizational Experiment	102
3.4.1 A Common Sense Understanding of Risk	103
3.4.2 A More Fundamental Understanding of Risk	104
3.4.3 Two Consequences of von Foerster's View on Risk	106
References	110
<b>4 The Second "arche," Organizations as Social Systems: Luhmann</b>	113
4.1 Introduction	113
4.2 Luhmann's General Theory of Social Systems	114
4.2.1 Autopoietic or Self-Producing Systems	115
4.2.2 Meaning Processing Systems	124
4.2.3 Social Systems	129
4.3 The Social "arche": Organizations as a Particular type of Social Systems	137
4.3.1 Elements of Organizations: Decisions	139
4.3.2 The Organization's Structure: Decision Premises	142
4.3.3 Processes of Self-Production: The Autopoiesis of Organizations	154
4.3.4 Questions Concerning Luhmann's Theory of Organizations	155
4.4 Organizations as social systems reflecting complexity	160
References	162
<b>5 Epilogue to Part I: The Two "Archai" Combined</b>	165
5.1 Introduction	165
5.2 Cybernetics and Social Systems Theory; an Exploratory Comparison	166
5.2.1 The Goal and Core Concepts of Respectively Cybernetics and Social Systems Theory	166
5.2.2 Cybernetics and Social Systems Theory Compared	168
5.3 Combining the Experimental and the Social "Arche"	170
5.4 Transition to Part II: Designing organizations	175
References	175
<b>6 Beer: Functional Design Principles for Viable Infrastructures</b>	177
6.1 Introduction	177
6.2 Viability and Complexity	179
6.2.1 Complexity Relations Between Environment, Organization, and Its Management	179
6.2.2 Three Strategies to Solve the Complexity Problem	180
6.3 A functional Model of Viability	189

6.3.1	What Does it Mean to Make a Functional Model of a Viable System? .....	189
6.3.2	Beer's Functional Model of Viable Organizations .....	192
6.3.3	Relations Between Functions .....	201
6.3.4	Diagnosing and Designing Viable Infrastructures .....	209
6.4	The Viable System Model and Social Systems Conducting Experiments .....	211
6.4.1	Example 1 .....	218
6.4.2	Example 2 .....	219
	References .....	221
<b>7</b>	<b>Specific Design Principles: de Sitter's Organizational Structures .....</b>	<b>223</b>
7.1	Introduction .....	223
7.2	Designing Organizational Structures: Aiming at Attenuation and Amplification .....	226
7.2.1	Organizational Structures .....	227
7.2.2	Relevant Organizational Variables .....	237
7.2.3	Disturbances .....	239
7.2.4	Attenuation and Amplification by Organizational Structures .....	241
7.3	Principles for Designing Organizational Structures .....	242
7.3.1	Design Parameters .....	243
7.3.2	Using Design parameters to Formulate Design Principles .....	249
7.4	De Sitter's Organizational Structures and Conducting Experiments .....	273
7.4.1	Relating de Sitter to Ashby, Luhmann and Beer .....	273
7.4.2	How Do Low Parameter Structures Benefit Organizational Experimentation? .....	275
	References .....	276
<b>8</b>	<b>Epilogue to Part II: functional and specific design principles .....</b>	<b>277</b>
8.1	Introduction .....	277
8.2	Summary of the Design Principles .....	277
8.2.1	Functional Design Principles .....	278
8.2.2	Specific Design Principles .....	278
8.3	The Status of the Design Principles .....	279
8.3.1	Principles of Experiments with Meaningful Survival .....	280
8.3.2	Design Principles Figuring in Experiments with Meaningful Survival .....	281
8.4	Transition to Part III: Poor and Rich Survival .....	283
<b>9</b>	<b>Poor Survival: Disciplining Organizational Behavior .....</b>	<b>285</b>
9.1	Introduction .....	285
9.2	Foucault: The Disciplines in the Eighteenth Century .....	287
9.2.1	The Analysis of Space .....	288
9.2.2	The Analysis of Bodily Operations .....	288
9.2.3	The Analysis of the Process of Production .....	289
9.2.4	The Synthesis of Space, Bodily Operations and the Process of Productions .....	289
9.2.5	Hierarchical Surveillance .....	289
9.2.6	Normalizing Sanctions .....	291
9.2.7	Examination .....	292
9.3	A Cybernetic and Social Systemic Generalization of the Disciplines .....	293
9.3.1	Cybernetic Analysis of the Disciplines .....	294
9.3.2	Social Systemic Analysis of the Disciplines .....	299
9.3.3	Cybernetic and Social Systemic Principles Underpinning Discipline in Organizations .....	302

9.4 Why are the Disciplines Disquieting? .....	303
9.4.1 Trivialization .....	304
9.4.2 Self-Trivialization .....	305
9.4.3 Fear as a Prime Motivational Factor .....	305
9.4.4 A Science of Discipline .....	306
9.4.5 Detachment and Lack of Involvement .....	306
9.4.6 Contingent and Minimal Goals .....	307
References .....	309
<b>10 Towards Rich Survival: Aristotle .....</b>	<b>311</b>
10.1 Introduction .....	311
10.2 The Highest Good for Man: Basic Distinctions .....	314
10.2.1 The Highest Good for Man: Living a Fulfilled Life .....	314
10.2.2 Characteristically Human Capacities and the Fulfilled Life .....	316
10.2.3 Virtues Involved in Eudaimonia .....	318
10.3 Eupraxia: Moral Virtue, Practical Wisdom, and Choice .....	321
10.3.1 Moral Virtue .....	322
10.3.2 Practical Wisdom .....	325
10.4 Aristotle Versus the Disciplines .....	341
References .....	343
<b>11 Organizational Structures Supporting Rich Survival .....</b>	<b>345</b>
11.1 Introduction .....	345
11.2 Incorporating the Organization into Society .....	345
11.3 Rich Survival: Specific Design Principles and Corresponding Structures .....	351
11.3.1 Requirements to and Design Principles for “Rich” Organizational Structures .....	351
11.3.2 Production and Control Structures Fitting the Design Principles .....	364
11.4 Organizations and Rich Meaningful Survival .....	370
References .....	372
<b>12 Epilogue .....</b>	<b>373</b>
12.1 Introduction .....	373
12.2 Organizations, “Archai”, Design Principles, and “Rich” Survival .....	373
12.3 Rich Survival: Its Applicability to Organizations and Relation to Poor Survival .....	375
12.4 Things to do .....	378
References .....	379
